

HI, I AM CAROLINA PEREIRA

Aspiring Developer transitioning from Textile Engineering. Skilled in Python and Front-end technologies, transforming complex data into accessible, user-friendly digital experiences.

CONTACT ME

MY CAPABILITIES

Minho University - Textile Engineering |
Master Degree / [2016] – [2022]

Developed strong analytical and problem-solving skills through a technical Master's degree, with expertise in textile materials, product development, and engineering research

IEFP - EFA Level 4 | [2025] – [2026]

Completed a rigorous 1,200+ hour software development program, earning a Level 4 qualification in Computer Programming

MY CERTIFICATIONS

- Harvard University: CS50's Introduction to Programming with Python | 2026
- Harvard University: Introduction to Databases with SQL | 2025
- Cisco: HTML Essentials | 2026
- Cisco: Operating Systems Basics | 2025
- Cisco: Computer Hardware Basics | 2025
- OERN: Web & Social Media Content Management | 2022

MY EXPERIENCE

Social Media Manager
@Farmacia Narcisa C Dias

Dec 21 – Dec 24

Managed social media channels on a freelance, part-time basis — developing content calendars, designing posts, and growing audience engagement.

Textile Engineer @Lameirinho

Jan 22 – Sep 24

Optimizing dyeing processes to improve reproducibility between laboratory and production scales. My work focused on enhancing operational efficiency by reducing costs and minimizing water waste, alongside providing technical support for startups through the "Test Beds - Textile of the Future" initiative.

Full-Stack Developer
@BuildCode

Apr 26 — Present

Applying software engineering principles to web development by designing robust solutions with ASP.NET MVC and Entity Framework Core to improve application scalability and data integrity.

MY PROJECTS

Gastrologic

Developed Gastrologic, a full-stack Zero-Waste platform using React, Node.js, and Express. I integrated external APIs for recipe searching and macronutrient tracking, utilizing SQLite for inventory intelligence and Tailwind CSS for a responsive UI. The project applies an engineering mindset to eliminate organic waste through data-driven food management

Habits-at

Developed an habit tracking PWA using Next.js and React, prioritizing a "warm" aesthetic over traditional UI frameworks with a custom CSS design system featuring dynamic theming. I helped implementing frontend logic including a browser-based notification scheduler and a local-first persistence layer via the Context API, ensuring an accessible and offline-ready user experience.
